Otwieranie pozycji - Market

Otwieranie pozycji po cenie rynkowej

Wybór dźwigni oraz pozycji Cross - Isolated

The screenshot shows the Binance Futures trading interface. At the top, there are tabs for 'Isolated' and '10x' leverage. Below that, there are order type options: 'Limit', 'Market' (highlighted in yellow), and 'Stop Market'. The available balance is shown as 'Avbl 145.71 USDT'. There is a 'Size' input field and a dropdown menu for the asset, currently set to 'BTC'. A horizontal slider is used to adjust the position size, with 'Buy 0.000 BTC' and 'Sell 0.000 BTC' labels. There are checkboxes for 'TP/SL' and 'Reduce-Only'. At the bottom, there are two large buttons: a green 'Buy/Long' button and a red 'Sell/Short' button. Below these buttons, the cost and maximum size are shown: 'Cost 0.00 USDT' and 'Max 0.067 BTC' for both. A 'Fee level' link is also visible.

Wielkość naszej pozycji wyliczona przy użyciu kalkulatora zgodnie z naszym MM

Otwarcie pozycji na wzrost czyli long

Otwarcie pozycji na spadek czyli short
